**Vitocom 100 LAN1 - Vitotrol App
Boiler control from your smart phone**

Vitocom 100 LAN1 / Vitodata100.com / Vitotrol App

Remote Control Of Heating Systems Via The Internet

Vitotrol APP or the Vitodata100.com website can be used to remotely access a heating system via the Vitocom 100 LAN1.

- To enable this, the Vitotronic control operating the boiler(s) must be extended with the Vitocom 100 LAN1 interface and must be connected to the internet via DSL or similar LAN router on site.
 - Configuration of the DSL router is not required.
- An active account, set up on the Vitodata100 website, needs to be established.
 - There is no cost for a Vitodata account.
- Boiler messages can be routed via:
 - Email: to a smart phone, tablet or PC.
 - SMS text message to a smart phone.
 - A fax number.
- Up to three heating circuits per location can be accessed.
- Multiple Vitocom 100 LAN1 devices can be accessed from the same account.

Vitocom 100 LAN1

Remote Control Of Heating Systems Via The Internet

Description:

- The Vitocom 100 LAN1 connects a Viessmann heating system via LON and LAN to the Vitodata server.
- Access to the server is possible via Vitodata 100 (www.vitodata100.com) or the Vitotrol App.

Vitocom 100 LAN1

Remote Control Of Heating Systems Via The Internet

Functions:

- Set up temperature set points (DHW + heating).
- Turn on comfort or energy saving mode.
- Access to operating schedules and temperatures.
- The Vitodata server can forward fault messages to the following alert targets:
 - Computer with Internet connection to receive a status E-Mail.
 - Mobile phone to receive a status SMS or E-mail.
 - A Fax for receiving messages
- Content of the messages:
- Address of the system, type of message, fault code, message text and time.

Vitocom 100 LAN1

Connecting To The Internet Without LAN Connections Near The Boiler

- If it is not feasible to get a **L**ocal **A**rea **N**etwork, **LAN**, cable from the DSL to the Vitocom 100 LAN1, the building's power wiring* can be used to connect the Vitocom 100 LAN 1 to the existing DSL router.
 - Third party Powerline Adaptors (various manufacturers) from a local computer supply house.

* This may not be possible in buildings with three phase power services.

Vitocom 100 LAN1

Connecting To The Internet Without LAN Connections Near The Boiler

- These adaptors will typically come as a kit.
 - 2 Powerline adaptors.
 - 2 LAN cables.
 - Plug one into a receptacle near the Vitocom 100 LAN1 and one into a receptacle near the DSL router.
 - Connect the LAN cables from the adaptors to the DSL and Vitocom 100 LAN1.
 - No configuration is normally required.

Vitocom 100 LAN1 / Vitotrol App

Remote Control Of Heating Systems Via The Internet

Vitotrol APP

- This application is a convenient tool for the remote operation of heating systems by end users.
- Heating contractors too, can be given the opportunity to connect to the heating system remotely to offer their customers additional service and maintenance facilities.
- The Vitotrol App is available free for:
 - Apple® devices.
 - Android® devices.

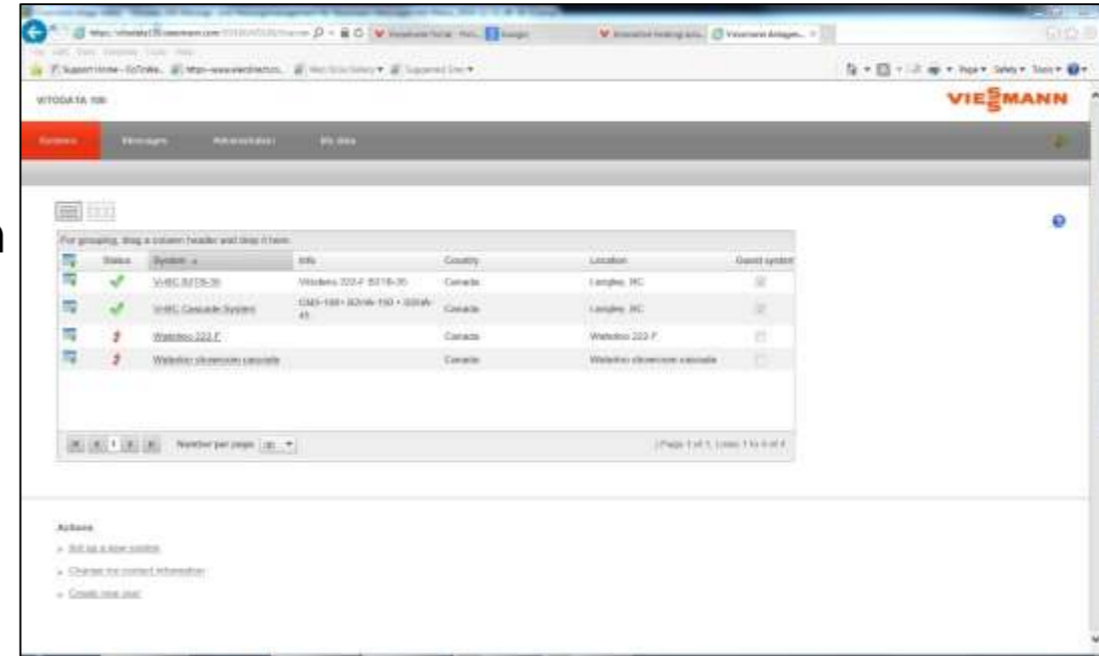

Vitocom 100 LAN1 / Vitotrol App

Remote Control Of Heating Systems Via The Internet

Vitodata 100 Webpage

www.vitodata100.com

- By logging onto the Vitodata100 webpage, using an active account, configured systems can be accessed remotely.
- Boiler messages are sent via the Vitodata100 system to a PC via
 - Email
- The Vitodata100 website is a convenient tool for the remote operation of heating systems by end users.
- Heating contractors too, can be given the opportunity to connect to the heating system remotely to offer their customers additional service and maintenance facilities.

Vitocom 100 LAN1 / Vitotrol App

Remote Control Of Heating Systems Via The Internet

Accessing multiple systems

- Multiple systems can be accessed via both the Vitodata100 website and the Vitotrol App.
- Multiple users can be set up for single or multiple systems.
- Different levels of access can be granted for each user.
 - Operator
 - Administrator
- Administrators can grant Guest user access to systems.

Vitocom 100 LAN1

Boiler LON Module Required For Connection To The Vitodata 100 LAN1

- The Vitocom 100 LAN1:
 - Can be ordered with the single RJ45 boiler LON module
 - Viessmann part # Z011224
 - For single boiler installations.
 - Can be ordered without the LON module
 - Viessmann part # 7501472
 - For multiple boiler systems
 - Individual LON modules need to be acquired separately for each Boiler, Mixing valve control and Cascade control in the system.

LON BUS Module

Current Control Compatibility

Boiler Series	Control Model
Vitodens 200-W B2HA / B	Vitotronic 200, H01B
Vitodens 222-F, B2TA / B	Vitotronic 200, H01B
Vitocrossal 300 CU3A	Vitotronic 200, KW6B*
Vitocrossal 200, CM2	Vitotronic 300, GW2B
	Vitotronic 300, GW5B
	Vitotronic 300, GW6B*
Vitocrossal 300, CT3	Vitotronic 300, GC1B
	Vitotronic 300, GW2B
Vitorond 200, VD2 / VD2A	Vitotronic 300, GC1B
	Vitotronic 300, GW2B
System (Cascade) Controllers	Vitotronic 300-K, MW1B*
	Vitotronic 300-K, MW2B (For Vitodens 200)
	Vitotronic 300-K, MW2C (For Vitodens 200)
Control Accessories	Vitotronic 300-K, HK1B

*Control includes integrated LON communication module

Vitocom 100 LAN 1

Legacy Control Compatibility*

- Boiler and system controls that are compatible* with the Vitocom 100 LAN1 system.
- All controls require a separate LON module except where noted.
 - Vitodens 200W WB2B
 - Vitocontrol -S Vitotronic 333 MW1, Includes LON module
 - Vitocontrol -S Vitotronic 300 MW2
 - Vitotronic 300K MW2B
 - Vitotronic 100 GC1
 - Vitotronic 300 GW2

* Existing installation configurations should be verified by Viessmann before compatibility can be assured.

Vitocom 100 LAN1

Setting Up The Vitodata 100LAN1 Device

Installation:

- Mounting
- To remove the front cover **slide to the right and pull forward away from the unit.**

Vitocom 100 LAN1

Setting Up The Vitodata 100LAN1 Device

Installation:

■ Wiring

- 1 Plug-in power supply unit connection, 5 VDC through supplied power module
- 3 Not Used
- 4 RJ 45 connector for LAN connection cable to DSL router
- 9 LON terminator, is enabled in the delivered condition (position of switch left, do not adjust)
- 10 RJ 45 connector for LON connection cable (red) to the Vitotronic control unit (see communication module installation instructions)

Vitocom 100 LAN1

Updating LON participants list

- In the following cases, the LON participants list in the Vitocom 100 LAN1 must be updated:
 - New LON participants are installed.
 - LON participants have been removed.
 - The LON communication module of an existing subscriber has been replaced.
- To update the LON participants list, hold down reset button “T4” for approx. 10 sec.

Note: If the reset button “T4” is held down for approx. 30 sec., the Vitocom 100 LAN1 is returned to its delivered condition.

Vitocom 100 LAN1

Initialization

When the Vitocom 100 LAN1 is initializing, the following processes run in sequence:

1. The Vitocom 100 LAN1 starts and loads the internal operating software
The operating status display “4” flashes green after max. 40 sec. After a few minutes, operating status display “4” illuminates green.

“T1” Maintenance button

“1” LON service Indicator

“3” IP connection status
(green and yellow LED)

“4” Operating status display
(green and red LED)

Vitocom 100 LAN1

Initialization

When the Vitocom 100 LAN1 is initializing, the following processes run in sequence:

2. Connect with the Vitodata server IP connection status display “3” shows the procedure for establishing the connection:
 - **Flashes yellow slowly:**
 - The Vitocom 100 LAN1 is integrated into the on-site IP network (obtain IP address of DHCP server).
 - **Flashes yellow quickly:**
 - internet connection is being established.
 - **Illuminates yellow:**
 - Connection to the Vitodata server is being established.
 - **Illuminates green:**
 - Secure connection to the Vitodata server is established.

“T1” Maintenance button

“1” LON service Indicator

“3” IP connection status
(green and yellow LED)

“4” Operating status display
(green and red LED)

Vitocom 100 LAN1

Initialization

When the Vitocom 100 LAN1 is initializing, the following processes run in sequence:

3. Connect with the Vitotronic control unit via LON

The Vitocom 100 LAN1 creates a list of all LON participants.

Note: It may take several minutes to establish the connection via LON.

“T1” Maintenance button

“1” LON service Indicator

(green and yellow LED)

“4” Operating status display
(green and red LED)

Vitocom 100 LAN1

Initialization

Initialization Successful

- The Vitocom 100 LAN1 is ready for operation. The following LED indicators illuminate green: operating status display **“4”** and IP connection status **“3”**.

Initialization not successful

- If a fault occurs during initialization, this is indicated by the associated LED indicators.

“T1” Maintenance button

“1” LON service Indicator

“3” IP connection status
(green and yellow LED)

“4” Operating status display
(green and red LED)

Vitocom 100 LAN1

LON Participant Check

Requirements:

- The Vitocom 100 LAN1 is connected to the Vitotronic control unit via LON.
- All devices are switched on.
- LON participants numbers are assigned to the Vitotronic control units. (**every unit on a LON bus must have a unique LON number**)
- The Vitotronic control unit is the fault manager.

Note: The Vitocom 100 LAN1 has a fixed LON participant number of “99”.

Note: If the participants check was successful, LON service display “1” flashes green at the Vitocom 100 LAN1 for approx. 1 min and “Check OK” appears in the Vitotronic display.
During the check the word “WINK” may display on some controllers.

“T1” Maintenance button

“1” LON service Indicator

“3” IP connection status
(green and yellow LED)

“4” Operating status display
(green and red LED)

Vitocom 100 LAN1

Registering The Vitocom 100 LAN1

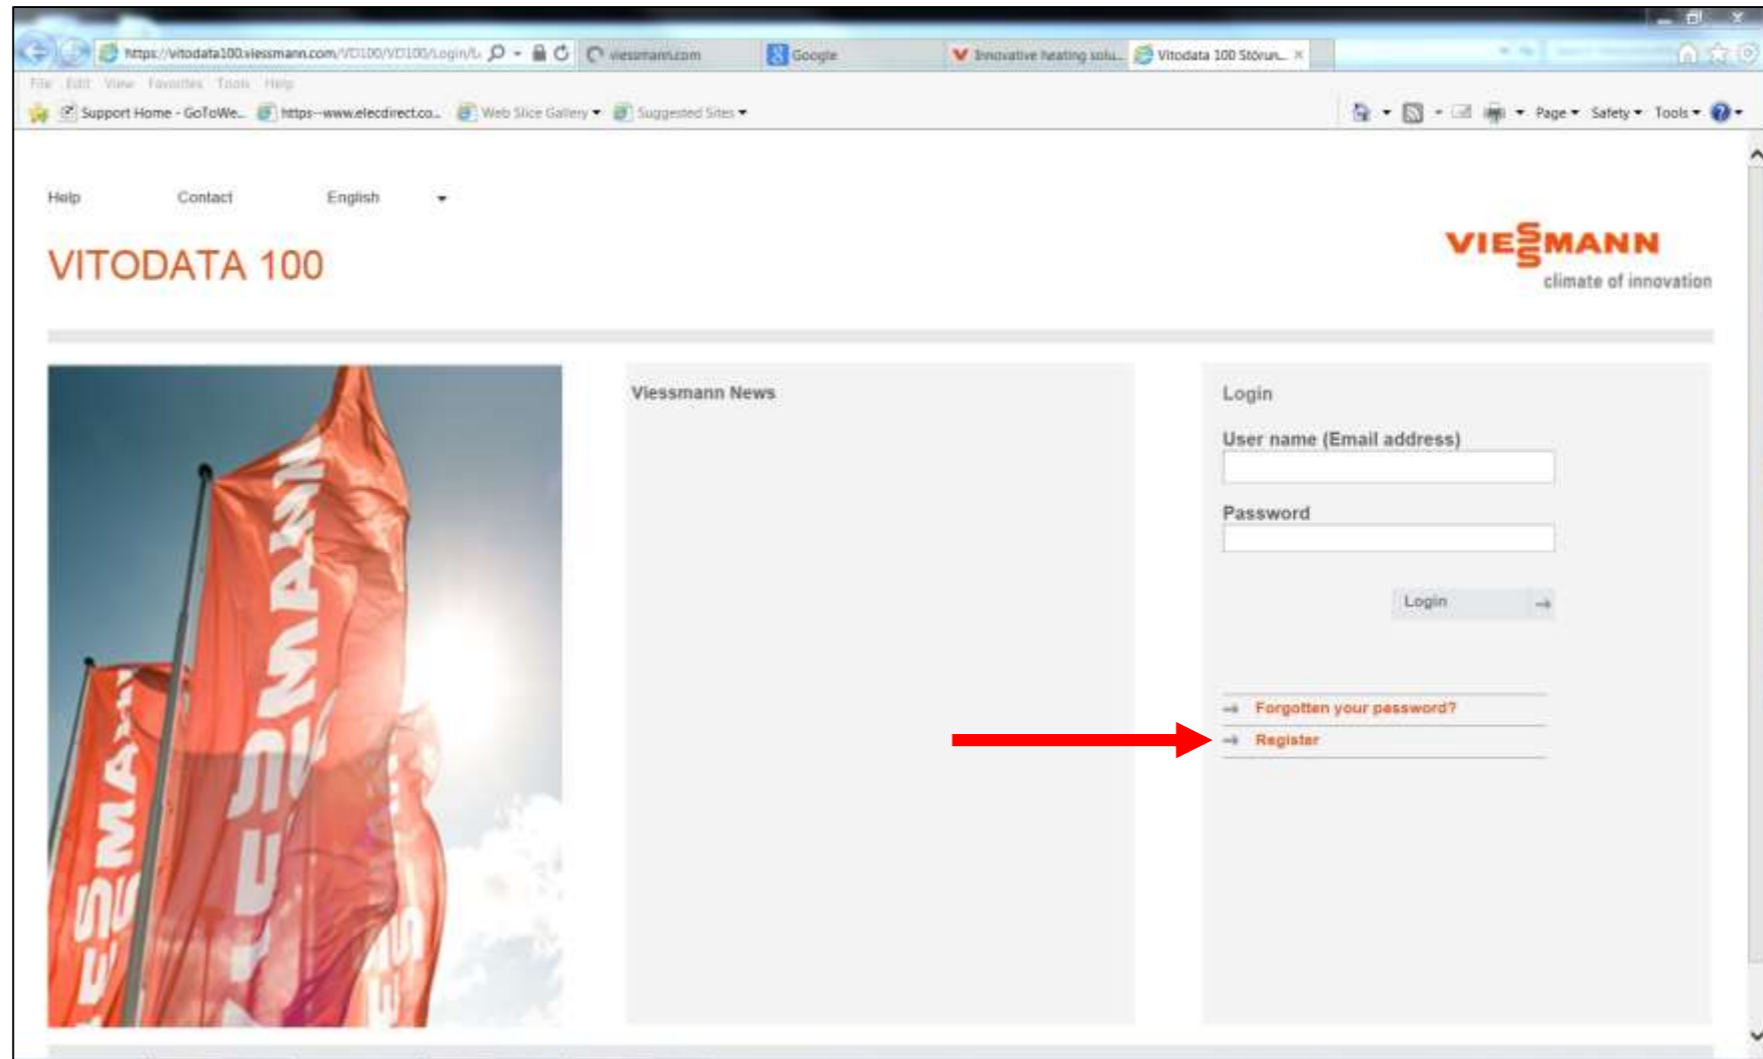

- After the Vitocom 100 LAN1 has been installed it must be registered to a new or existing Vitodata 100 account.

Vitodata Server

Registering A **New Account** @ www.vitodata100.com

- Go to the Vitodata 100 Login webpage.
- Click Register.

Vitodata Server

Registering A **New Account**

- Fill in required information.

The screenshot shows a web browser window displaying the registration page for the Vitodata 100 server. The page has a header with 'VITODATA 100' and the Viessmann logo. A registration form is highlighted with a red border. The form contains the following fields:

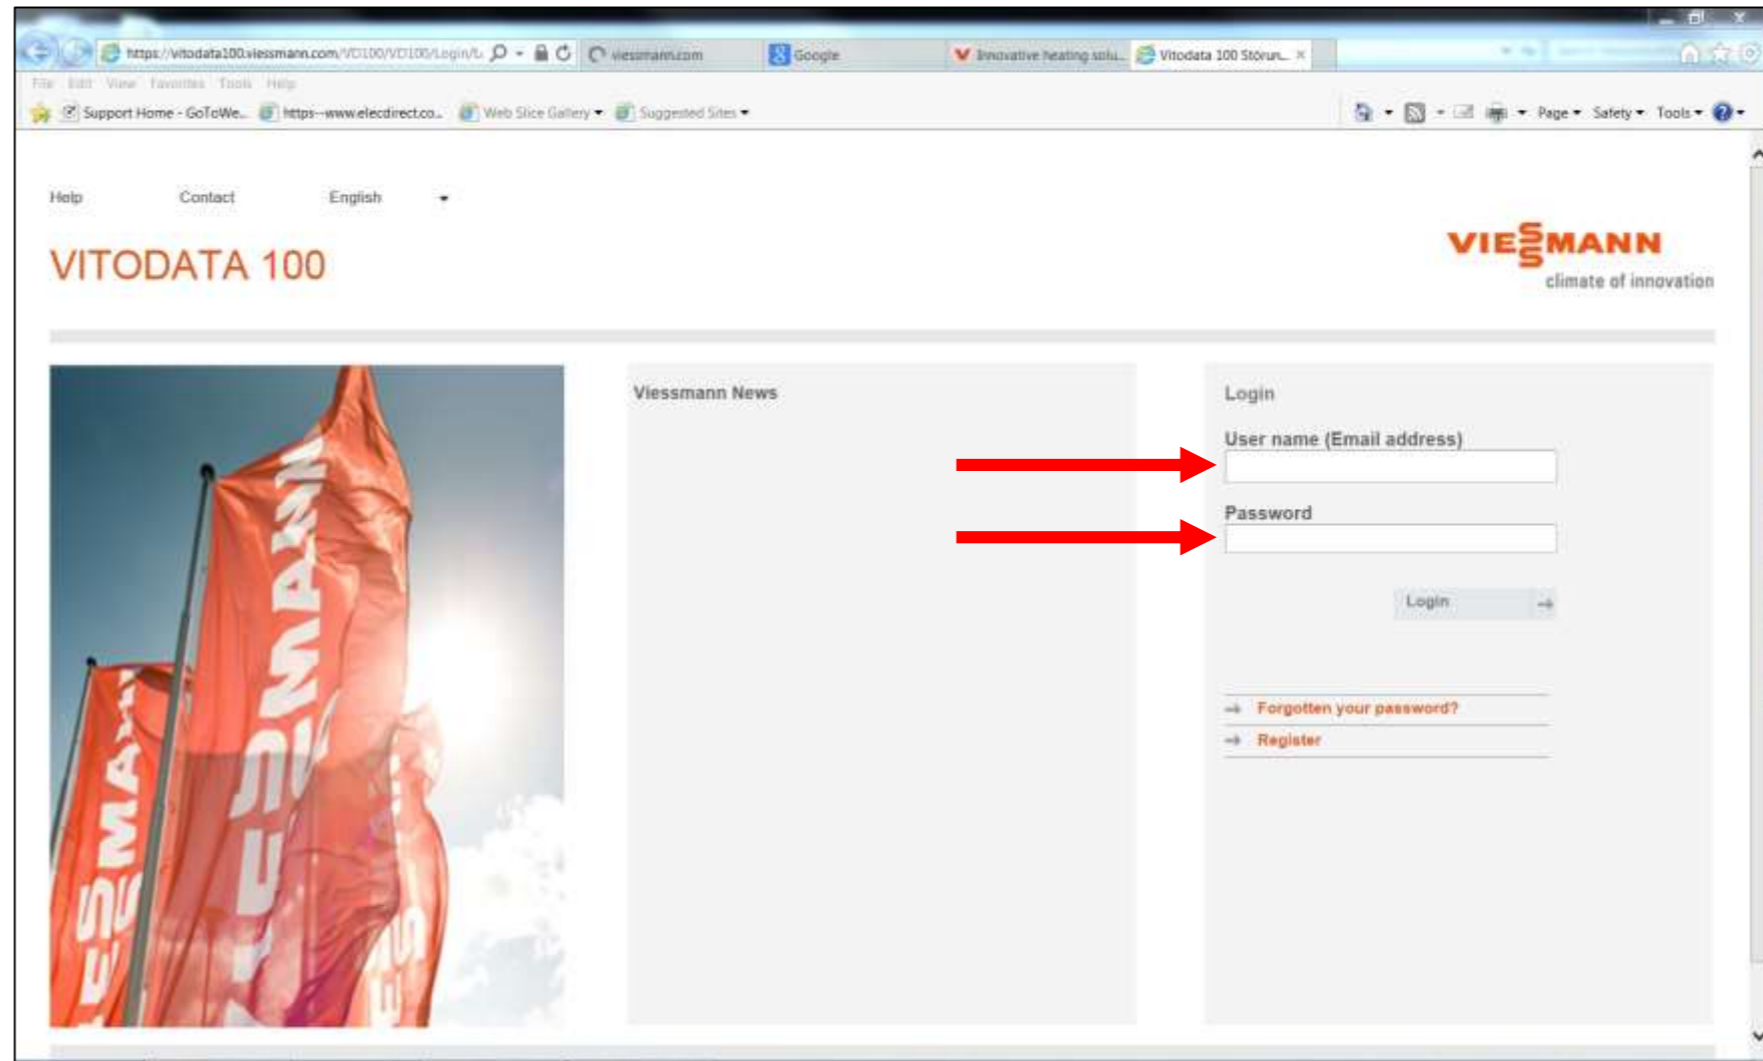

- Title * (Dropdown menu with 'Mr' selected)
- First name *
- Surname *
- Email address *
- Password *
- Re-enter password *

Below the password fields is a 'Next' button. At the bottom of the form, there are links for 'Back to login' and 'Compulsory field *'.

Vitodata Server

Logging Onto An **Existing Account** @ www.vitodata100.com

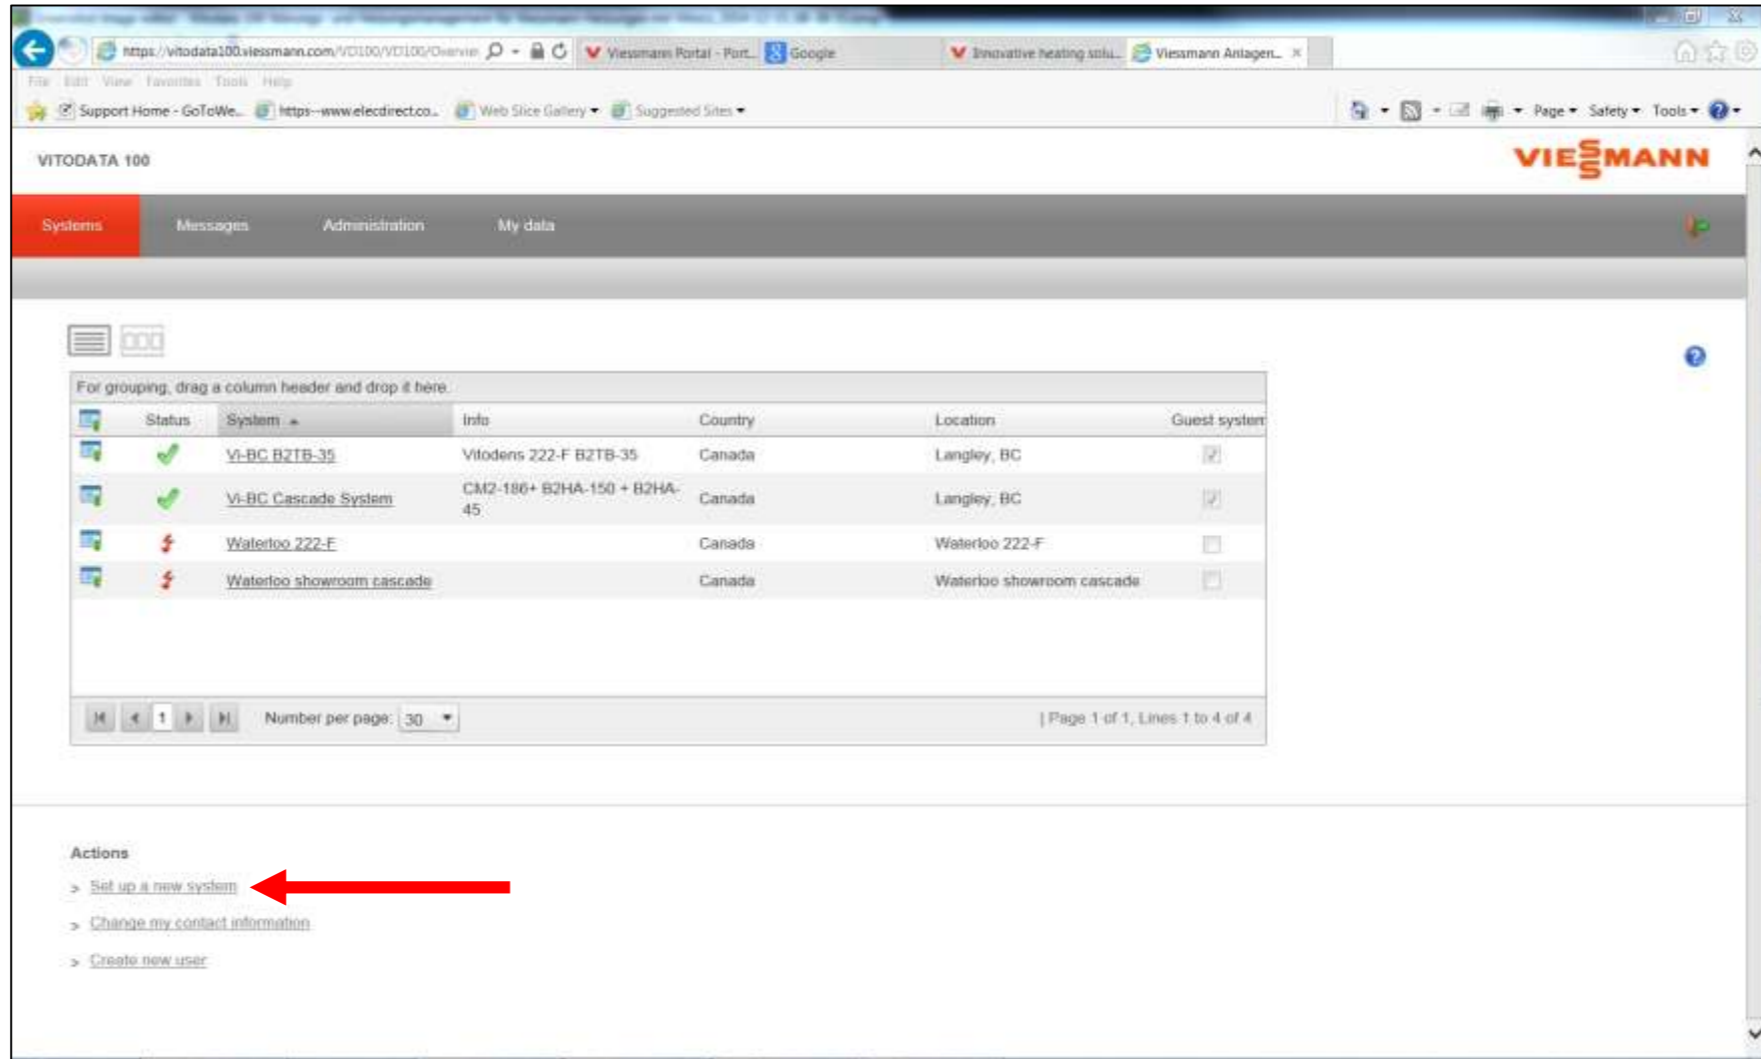

- Go to the Vitodata 100 Login webpage.
- Enter login User name (Email address) and Password.

Vitodata Server

Create A New System From A New Or Existing Account

- Click, “Set up a new system”.

The screenshot shows the Vitodata 100 web interface. The browser address bar displays <https://vitodata100.viessmann.com/VD100/VD100/Overview>. The page header includes the Viessmann logo and navigation tabs for Systems, Messages, Administration, and My data. The main content area features a table with the following data:

Status	System	Info	Country	Location	Guest system
✓	Vi-BC B2TB-35	Vitodens 222-F B2TB-35	Canada	Langley, BC	<input checked="" type="checkbox"/>
✓	Vi-BC Cascade System	CM2-186+ B2HA-150 + B2HA-45	Canada	Langley, BC	<input checked="" type="checkbox"/>
✗	Waterloo 222-F		Canada	Waterloo 222-F	<input type="checkbox"/>
✗	Waterloo showroom cascade		Canada	Waterloo showroom cascade	<input type="checkbox"/>

Below the table, there is a pagination control showing "Page 1 of 1, Lines 1 to 4 of 4" and a "Number per page: 30" dropdown. At the bottom of the page, an "Actions" menu is visible with the following options:

- > [Set up a new system](#) (indicated by a red arrow)
- > [Change my contact information](#)
- > [Create new user](#)

Vitocom 100 LAN1

Locating The 16 Digit Manufacturer's (Serial) Number

Installation:

- For connecting the Vitocom 100 LAN1 to the Vitodata 100 platform, it is necessary to type in the 16-digit manufacturer's (serial) number from the Vitocom 100 LAN1.

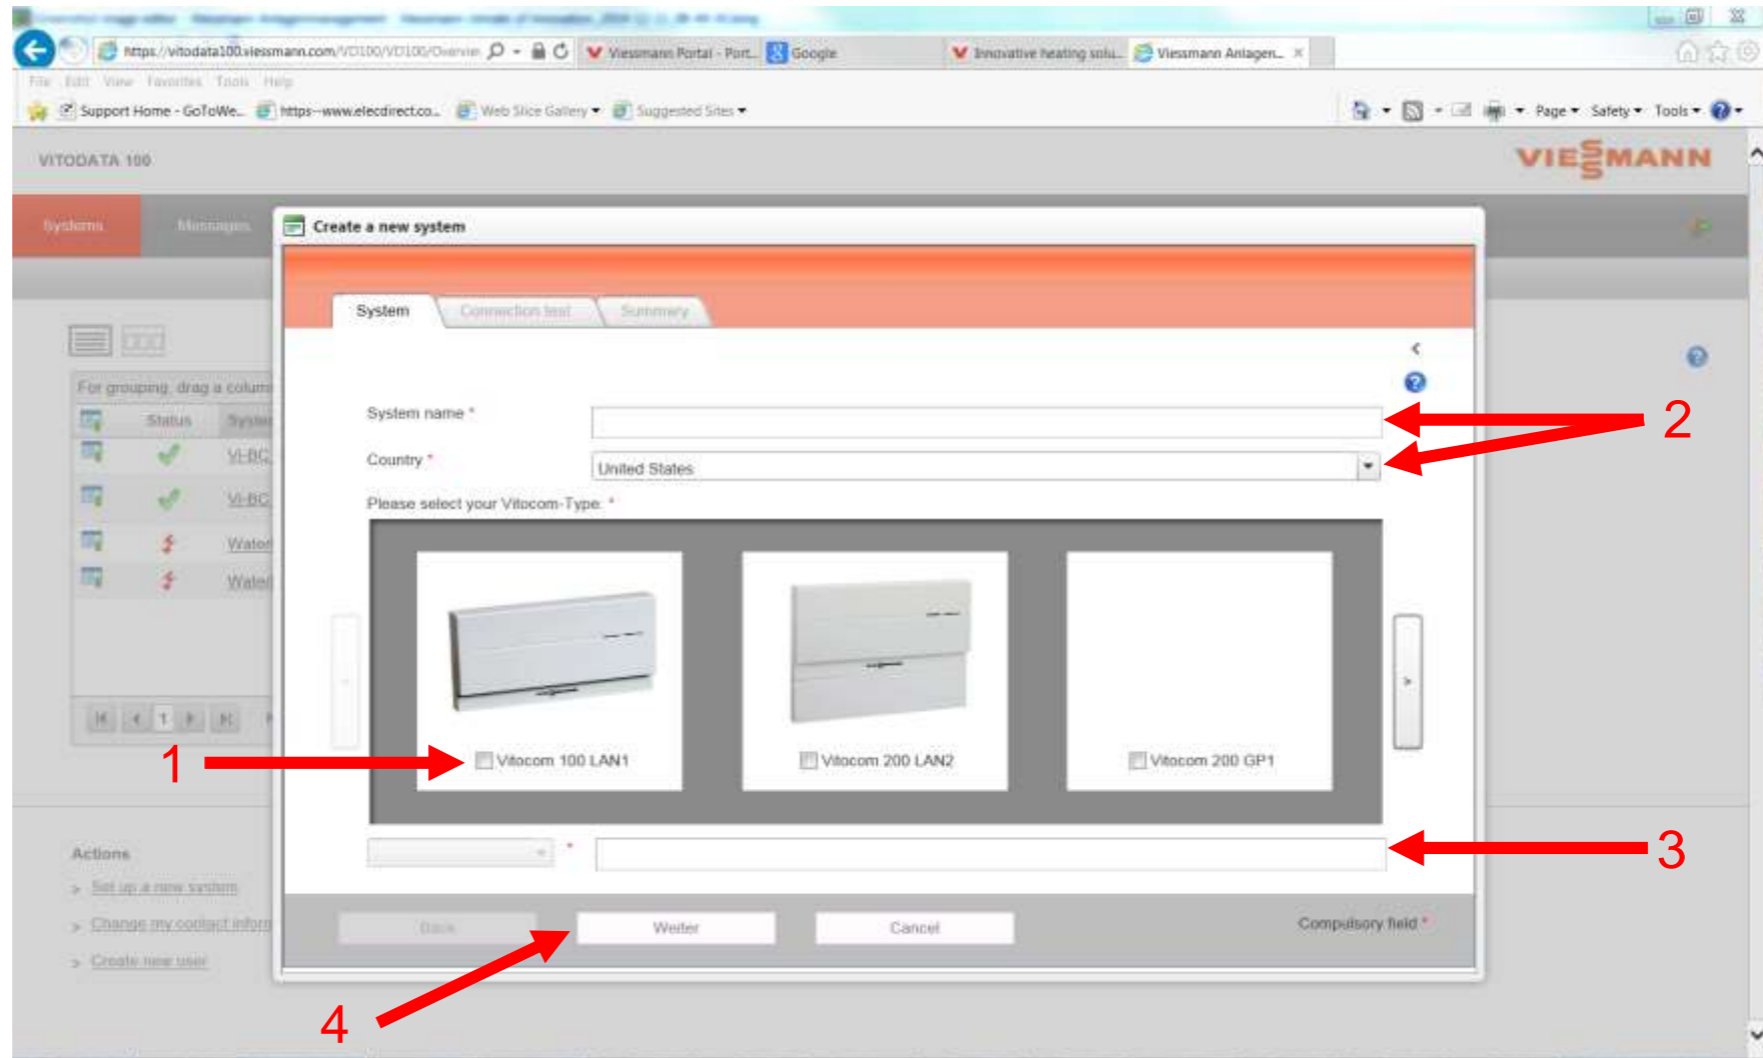

16 Digit Manufacturer's (serial) Number

Vitodata Server

Create A New System From A New Or Existing Account

1. Under the system tab Select Vitocom 100 LAN1.
2. Enter: a system name and country of the system's location.
3. Enter:
manufacturer's
(serial) number.
4. Then click, Weiter.

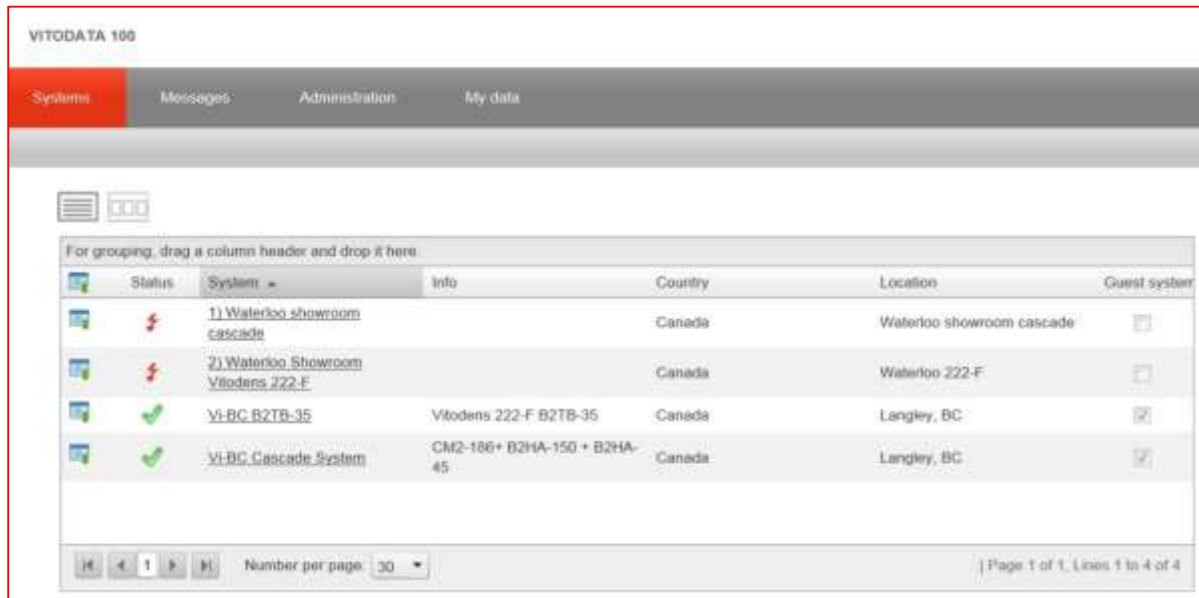

Vitodata Server

Setting Up New Users

- The account / system administrator can add new users as administrators or operators.
- They can also invite guests as operators to the account.
- Guests and users have access to all systems in the account except systems the administrator has been invited as a guest to.

Administrator
