Vitocell 100-B
CVBB and CVB Series
Dual-coil, indirect-fired domestic hot water storage tank
79 USG and 119 USG (300 L and 450 L) capacity

Indirect-fired domestic dual-coil hot water storage tank
steel construction, with Ceraprotect enamel coating.

One heat exchanger coil facilitates heat transfer from
the solar collectors to domestic hot water, a second
heat exchanger coil allows reheating of the water
content by the hot water heating boiler.

Product may not be exactly as shown

CAUTION
This tank version is not suitable for steam heating applications.
Domestic hot water storage tank of corrosion protected steel with built-in insulation made of PUR Foam.
Fully hygienic, efficient and economical domestic hot water production by solar collectors and a hot water heating boiler.
Heat from the solar collectors is transferred to the domestic hot water via the lower tank coil.

Benefits at a glance:

- Corrosion-resistant tank with Ceraprotect enamel coating ensures a long service life. Additional cathode protection is provided by a magnesium anode.
- The entire water content is heated by a coiled 1” (25 mm) diameter steel heat exchanger surface which extends to the bottom of the tank.
- Large heat exchanger surfaces allow fast and even heating of the entire water content, guaranteeing a high level of domestic hot water comfort.
- Increased energy savings thanks to highly effective, foamed-in-place HCFC-free insulation keeping standby losses at a minimum.
- Two thermometers to show the DHW temperature at the top of the tank and at the midpoint of the tank.
- The Vitocell-B 100 119 USG (450 L) capacity tank is supplied with removable soft PET insulation for easier handling.
- For dual-mode DHW heating with solar panels in conjunction with a boiler. The solar energy gathered by the solar panels is transferred to the DHW by the lower indirect coil. For mono-mode DHW heating with a boiler or heat pump - both indirect coils can be connected in series.
- Certified to CSA Low Lead Content Certification Program; including US Safe Drinking Water Act, NSF/ANSI 372 as well as other applicable US State requirements.
Highly effective foamed-in-place hard PUR foam insulation [HCFC free, 79 USG (300L)] or soft PET insulation [119 USG (450L)]

Domestic hot water

Two thermometers

Upper coil - domestic hot water is reheated by boiler

Recirculation tapping

Steel domestic hot water tank with Ceraprotect enamel coating

Lower coil - connection for solar connectors

Inspection port / cleanout opening

Domestic cold water / drain
For DHW production in conjunction with heating boilers and heating systems, without low limit for dual coil operation.

Suitable for heating systems with:
- max. working pressure on heat exchanger side up to 150 psig at 320°F (160°C)
- max. working pressure on DHW water side of up to 150 psig at 210°F (99°C)
- max. testing pressure on DHW side of 300 psig

For DHW production in conjunction with heating boilers and heating systems, without low limit for dual coil operation.

*1 The upper coil is designated for connection to a hot water heating boiler or a heat pump.
*2 The lower coil is designated for connection to solar collector panels or heat pumps.
*3 When planning for the recovery rate as stated or calculated, allow for the corresponding circulation pump. The stated recovery rate is only achieved when the rated output of the boiler is equal to or greater than that stated under “Recovery rate”.
*4 Measured values are based on a room temperature of 68°F (20°C) and a domestic hot water temperature of 149°F (65°C) and can vary by 5%.
*5 For other dimensions, see illustration and table on page 5.
*6 Adjustable feet can be adjusted up to 2 in. (50 mm).

For information regarding other Viessmann System Technology componentry, please reference the documentation of the respective product.

MA Protective magnesium anode

For solar heating systems Viessmann recommends placement of the DHW tank temperature sensor of the solar control in the solar collector return (SCR). This requires a brass elbow with sensor well included in the accessory pack. The DHW tank temperature sensor of the boiler control is placed in the SW1 sensor well (see installation example on page 8).

DHW tank temperature sensor in solar heating applications 79 USG (300 L).
DHW tank temperature sensor in solar heating applications 119 USG (450 L).

CVB 79 USG (300 L) capacity DHW Tank
DHW tank made from steel with Ceraprotect enamel coating.
- 2 welded sensor wells for DHW tank temperature sensor, i.e. aquastat, and the thermometer
- adjustable leveling bolts
- protective magnesium anode
- fitted thermal insulation made from hard PUR foam
- threaded elbow with sensor well
The color of the epoxy-coated sheet metal casing is Vitosilver.
The following are packed separately and attached to the crate:
- 1 brass elbow with sensor well
- 1 temperature and pressure relief valve
- 2 thermometers °F / °C
- 1 brass tee (1”)
- 1 brass hex bushing (1”x¾”)
- 1 brass cap (1”)
- 1 plug (R1½”)

CVB 119 USG (450 L) capacity DHW Tank
DHW tank made from steel with Ceraprotect enamel coating.
- 2 welded sensor wells for DHW tank temperature sensor, i.e. aquastat, and the thermometer
- protective magnesium anode
- fitted thermal insulation made from soft PET insulation, packed separately
- threaded elbow with sensor well
- adjustable leveling bolts
- protective magnesium anode
The color of the plastic-coated thermal insulation is Vitosilver.
The following are packed separately and attached to the crate:
- 1 temperature and pressure relief valve
- 1 brass tee (1¼”)
- 1 brass elbow with sensor well
- 1 brass cap
- 2 thermometers °F / °C
- 1 plug (R1½”)

WARNING
Due to the potentially high DHW temperatures generated by the solar heating system, the domestic hot water temperature must be limited to a maximum of 140°F (60°C) by installing a mixing device, e.g. a thermostatic mixing valve. The mixing device does not completely eliminate the risk of scalding at the tap. The installation of a mixing tap is required.
Installation Example

Legend

A  Solar collector
B  Vitocell 300-B
C  Filling valve
D  Solar-Divicon (pumping station)
E  Recirculation pump
F  Anti-scald tempering valve
HC  Heating circuit
B  Oil/Gas-fired boiler
DCW  Domestic cold water
DHW  Domestic hot water
T&P  Temperature and pressure relief valve
Sensor well
The sensor wells are welded into the DHW tank.

Sensor wells for solar operation
For solar heating systems, Viessmann recommends placement of the DHW tank temperature sensor in the solar collector return. This requires a brass elbow with sensor well included in the accessory pack (see page 8).

Temperature and pressure relief valve
A 150 psi temperature and pressure relief valve (T&P relief valve) is supplied with the tank. The heating contractor must install the valve on each tank in a method meeting code requirements. If local codes require a different relief valve, substitute the manufacturer’s supplied valve. The tank is approved for 100 psig where a Canadian Registration Number (CRN) is required. Maximum operating pressure is 150 psig.

Backflow preventers
Where backflow preventers are required, a domestic water expansion tank installation is recommended in the cold water inlet piping before the cold water enters the Vitocell. For the backflow device, observe local plumbing codes and regulations.

Warranty consideration
Viessmann DHW tanks require that the water to be heated must be of drinking (potable) water quality and that any water treatment equipment in use must function correctly.

Viessmann accepts no responsibility for damage howsoever caused and reserves the right to withdraw the product warranty if the product has been improperly installed or misapplied by the installer, contractor or final user. In order to qualify for product warranty, strict adherence to the installation and service manuals must be assured.

In the event that Viessmann non-approved components are utilized, Viessmann reserves the right to withdraw all expressed or implied warranties without written notice.

The water to be heated with the Vitocell must be drinking (potable) water quality. If the tank is used to heat other media, the warranty will be null and void.

Damage resulting from excessive pressure or temperature is clearly not the responsibility of Viessmann.

The amount of chloride and sulfate acceptable to the tank is limited. In areas where high concentrations of chloride and sulfate are present in drinking water, please consult Viessmann for directions.

For full warranty details, please read the product warranty sheet.

Heating water supply temperature over 230°F (110°C)
These operating conditions require the installation of an additional safety high limit into the DHW storage tank, preventing the temperature from rising above 203°F (95°C). A domestic hot water tempering valve must be used.
